

[Peiman, Brouki Milan] Ph.D

Tissue Engineering

Department of Tissue Engineering & Regenerative Medicine

Faculty of Advanced Technologies in Medicine

Iran University of Medical Sciences

Tehran, Iran

1449614535

Telephone: 09129210104 / e-mail: Peiman.brouki@gmail.com

EDUCATION

2013/2016	Tehran University of medical sciences-Tehran, Iran Doctor of Philosophy (PhD) in Tissue Engineering
2010/2012	Tabriz University of medical sciences-Tabriz, Iran Master of Science in Anatomical Science

PROFESSIONAL APPOINTMENTS

2021 - End Date	Tehran University of medical sciences-Tehran, Iran Department Head, Tissue Engineering
-----------------	---

MEDICAL AND SCIENTIFIC SOCIETIES

2017	TERMIS
2018	iTERM

POST DOCTORIAL CONFERENCES

- 2018 the 3rd Iranian progress in Tissue engineering and Regenerative Medicine in the field of urology, Kermanshah, Iran
- 2016 the 3rd Iranian Congress on progress in Tissue engineering and Regenerative Medicine, Tehran, Iran
- 2016 the 3rd Iranian Congress on progress in Tissue engineering and Regenerative Medicine, Tehran, Iran
- 2016 the 1st Iranian Wound and Burn Congress, Shiraz, Iran.
- 2015 the 2nd Iranian Congress on progress in Tissue engineering and Regenerative Medicine, Tehran, Iran.

RESEARCH PROJECTS

Funding agency: Iran University of Medical Sciences (#97-01-87-32574)

Role: Principal Investigator

Title: Fabrication of 3D scaffolds of bioactive glasses containing magnesium and evaluation of its implantation together with bone marrow stromal cells in the management of an experimental model of critical bone defect in rats

Funding dates: 1/1/2018 - 2019

Description: In the present study, we aim to develop a bone substitute based on the bioactive glass to be a suitable alternative to natural bone. In order to accelerate the vascular formation process and osteogenesis, magnesium ions are doped in the sample structure. As it turns out, one of the essential topics in tissue engineering is the vascularity of structures.

Funding agency: Iran University of Medical Sciences (#1397-01-117-33032)

Role: Principal Investigator

Title: Preparation and evaluation of the collagen-based skin substitute

Funding dates: 15/10/2019 - 2020

Description: Collagen is the most prevalent animal protein, with a broad distribution in soft and hard connective tissues. Natural collagen may be produced into highly structured, three-dimensional scaffolds in vitro, which are innately biocompatible, biodegradable, nontoxic when applied exogenously, and have high

tensile strength. These attributes make collagen the material of choice for wound healing and tissue engineering applications. Due to the perfect effect of collagen-based skin structures, an attempt is made to make a collagen skin substitute in this study.

Funding agency: Iran University of Medical Sciences (#99-2-14-18720)

Role: Principal Investigator

Title: Designing and synthesis of injectable hydrogel based on dialdehyde carboxymethyl cellulose-chitosan containing borate bioactive glass for wound healing in mice model

Funding dates: 18/04/2021 - ongoing

Description: To provide a smart bioadhesive with extended, stimuli-driven, and slow-release function, chitosan/CMC-based biocompatible, tunable, and injectable hydrogels embedded with bioactive borate-glass were created.

Funding agency: Iran University of Medical Sciences (#98-2-14-15190)

Role: Principal Investigator

Title: Production characterization and evaluation of berberis integerrima extract encapsulated nanofibers for diabetic wound dressing

Funding dates: 24/09/2019 - ongoing

Description: We are attempting to make hybrid calcium alginate/polycaprolactone nanofibers. The purpose of using polycaprolactone is to improve the strength of scaffolds while maintaining the biological characteristics of calcium alginate. Two-axis electrospinning will be employed in this research. Hybrid nanofibers are created in this manner. Finally, experimental and biological (in vitro) investigations will be performed to investigate and assess the feasibility of this structure for cell growth and proliferation.

Funding agency: Iran University of Medical Sciences (#98-4-14-16643)

Role: Principal Investigator

Title: Evaluation of the osteogenic and angiogenic potential of the olfactory mucosa stem cells in a bone-on-a-chip system and animal model

Funding dates: 24/03/2020 - ongoing

Description: This study investigates the olfactory mucosa stem cells for differentiation into bone line cells by creating a bone microenvironment on a three-dimensional substrate. We will examine the osteogenic and angiogenic potential of the Olfactory derived cells in vitro and then examine the repair potential of these stem cells in vivo in the rat bone defect model.

Funding agency: Iran University of Medical Sciences (#97-02-87-33265)

Role: Principal Investigator

Title: Evaluation of therapeutic effects of the activated macrophages associated with decellularized amniotic membrane on an experimental wound model healing in mice

Funding dates: 28/10/2018 – 22/06/2021

Description: The main goal of this study was to assess the effects of mesenchymal stem cell supernatant on differentiation of the isolated monocyte into M2 type macrophages, as well as the healing impact of these cells were evaluated in a full-thickness animal incisional wound model.
